

1. Vision, niche & value prop

- Who exactly is the platform for on each side?
 - Types of physiotherapists (home visit, sports, neuro, pediatric, post-op, clinic-based, tele-physio)?
 - Types of patients (location, age, income, injury type, chronic vs acute)?
 - What is the single biggest problem this solves for:
 - Physiotherapists?
 - Patients?
 - In 1–2 lines, how should this platform be described? (e.g., “Practo for physiotherapy only” / “UrbanCompany for physios” etc.)
 - What will make this platform obviously better than:
 - Practo, Urban Company, local clinics, or WhatsApp referrals?
 - Which geography are we focusing on at launch (city, state, PAN-India, or global)?
-

2. Core user flows

Patients

- How should a patient journey look, step by step?
 - Discover platform → search physio → view profile → book slot → pay → session → rate.
- What search filters should patients have?
 - Location / “near me”
 - At home vs clinic vs video session
 - Specialization (back pain, sports, neuro, geriatric, post-surgery, women’s health)
 - Price, experience, ratings, language, gender, availability time, emergency/express slots.
- What info must be visible in a physio profile?
 - Degrees, council registration, IAP membership, years of experience, specialties, languages, photos/video intro, clinic address, fees, availability, reviews.
- Do you want tele-consultation (video), or only in-person (home/clinic), or all three from day one?
- Should patients have:
 - Medical history section?

- Upload reports (MRI, X-ray, prescriptions)?
- Saved physios/favourites?
- Family profiles (book for parents/children)?

Physiotherapists

- How does a physio onboarding flow look?
 - Sign-up → KYC & license upload → admin verification → profile completion → set schedule → go live.
 - What documents are mandatory?
 - Degree, council registration, IAP membership, govt ID, clinic proof.
 - Will you support:
 - Solo physios only or also clinics with multiple physios & branches?
 - How should calendars work?
 - Availability by day/time
 - Buffer times, max patients per day, blackout dates, holidays, etc.
 - What can physios manage from their dashboard?
 - Appointments (accept/reject/reschedule)
 - Pricing, discounts, packages
 - Patient notes
 - Exercise plans / attachments
 - Earnings & payouts dashboard.
-

3. Booking, payments & pricing

- How should appointments be booked?
 - Instant booking, physio approval-based, or both options?
- Will you support:
 - One-time sessions
 - Packages (e.g., 10-session rehab plan)
 - Subscription / ongoing plans?
- Payment model at launch:
 - Patients pay on platform, and you take commission?
 - Or lead-based: patient contacts physio directly, no online payment initially?
- Payment methods to support:
 - UPI, cards, net banking, wallets, COD for home visits?
- Refund & cancellation rules:
 - Who bears cancellation cost (patient vs physio vs platform)?

- How many hours before the appointment can they cancel/reschedule?
 - Settlement model for physios:
 - Payout frequency (T+1, weekly, monthly)
 - Minimum payout threshold
 - Platform commission percentage.
-

4. Feature roadmap.

Possible MVP

- Patient & physio registration & login with roles.
- Physio verification workflow.
- Search & filters, physio profile pages.
- Real-time availability calendar & booking.
- Basic payment integration & invoices.
- Notifications: SMS/WhatsApp/email/push for booking, reminders, changes.
- Ratings & reviews.

Phase 2 ideas

- In-app chat between patient & physio (with audit/logs).
- In-app video calls for tele-physio.
- Exercise library: demo videos, prescribed plans per patient.
- Packages (8/12/20 sessions) and progression tracking.
- Basic EMR: visit notes, pain scores, goal tracking.
- Referral codes & credits.

Future/integrations

- Wearable integration (Apple Health, Google Fit) to track steps, ROM, etc.
 - AI posture/movement analysis using webcam/phone camera.
 - Integration with existing clinic software (WebPT, +Physio, etc.) so they can sync schedules.
 - Corporate plans for companies (ergonomics + rehab plans for employees).
 - Insurance/TPA integration, where possible.
 - Multi-language support (Hindi + regional languages + English).
-

5. Compliance, verification & safety

- In which jurisdictions will the platform operate initially? Rules differ by state/country.
 - What verification rules for physiotherapists?
 - Mandatory council registration?
 - Mandatory IAP membership?
 - What disclaimers and consent flows are needed?
 - Teleconsultation consent, emergency care disclaimers, “not a hospital” notice.
 - Data privacy:
 - Do we need HIPAA-like compliance for tele-physio? (If planning to go global)
 - Data residency preference (India vs global cloud)?
 - How will user reports/complaints be handled?
 - Reporting a provider, dispute handling, refund logic.
-

6. Admin & operations

- What should the admin panel be able to do day one?
 - Approve/reject physios
 - Edit/deactivate profiles
 - Manage content (specialties, FAQs, blogs)
 - View all bookings & payments
 - Issue refunds/adjustments
 - See dashboards: new users, active physios, revenue, cancellations.
 - Will there be different internal roles?
 - Super admin, operations, support, finance, and medical reviewer.
 - Do you want a built-in helpdesk/ticket system, or plug in something like Freshdesk/Zendesk later?
-

7. Branding, positioning & growth

- Brand positioning:
 - Premium, mass-market, or mid-tier?
 - Tone: clinical/serious vs friendly/wellness?
- Initial growth strategy:

- Start with a single city & dominate, or multiple cities from start?
 - Supply-side acquisition:
 - How to onboard the first 100 physiotherapists? (Associations, colleges, LinkedIn, cold outreach, events).
 - Demand-side acquisition:
 - Channels: Meta ads, Google “physiotherapist near me”, SEO, doctor referrals, hospital tie-ups, corporate tie-ups.
 - Do you want built-in content marketing from day one (blog on back pain, posture, exercises) for SEO?
-

8. Tech stack, platforms & constraints

- Web only for MVP, or also mobile apps (Android / iOS)?
 - Any strong preferences:
 - No-code/low-code vs fully custom?
 - Hosting (AWS, GCP, Azure, local provider)?
 - Scale expectations for Year 1:
 - Daily active users, monthly bookings, peak concurrent users.
 - Non-functional requirements:
 - Performance SLAs (page load, booking flow speed)
 - Uptime target (e.g., 99.5%)
 - Security requirements (encryption, 2FA, audit logs).
-

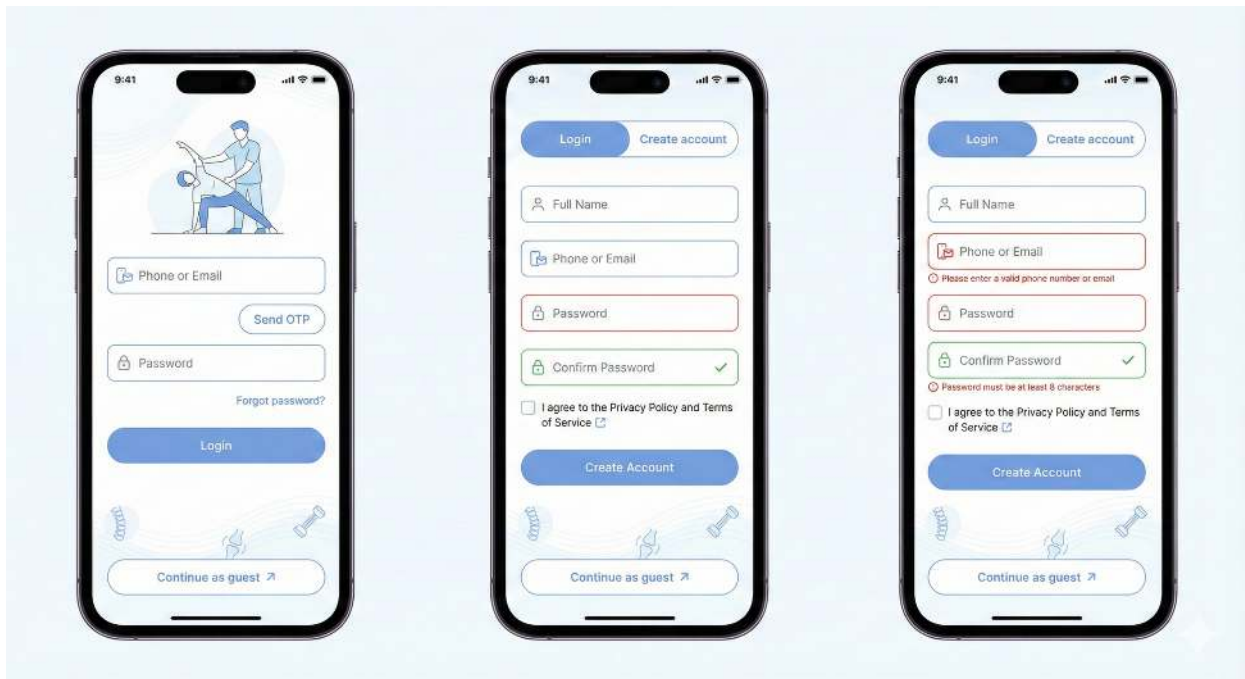

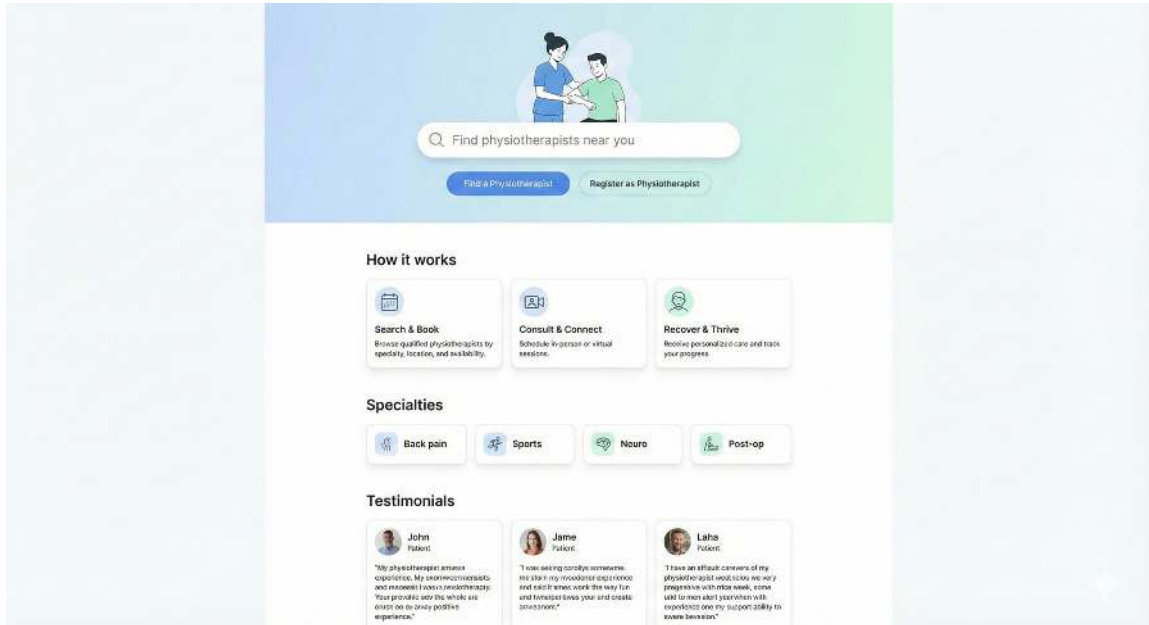

9. Monetization & long-term business model

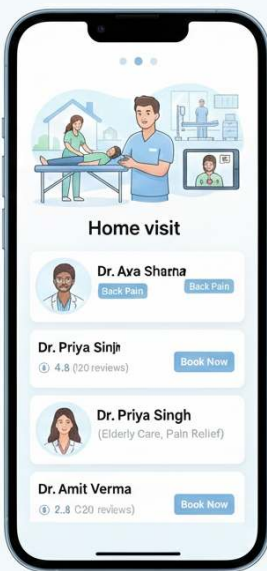

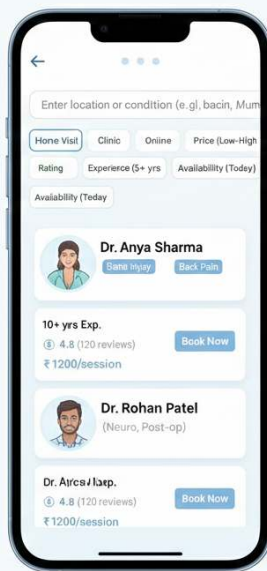

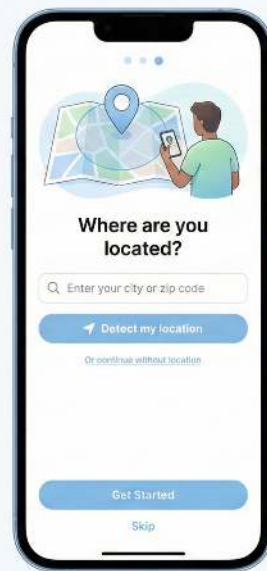

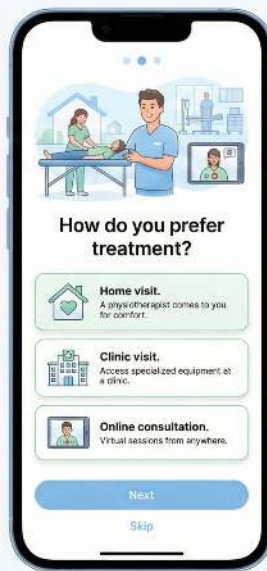

- Primary revenue model:
 - Commission per booking
 - Subscription for physios (listing + tools)
 - Lead charges (pay-per-lead)
 - Sponsored or Featured listing/ads for clinics.
 - Pricing vision:
 - Keep it free until certain traction or charge from day one?
 - Long-term expansion ideas:
 - Add other allied health verticals: occupational therapy, chiropractic, speech therapy, etc.
 - White-label for hospitals & chains.
-

10. “What if” future scenarios

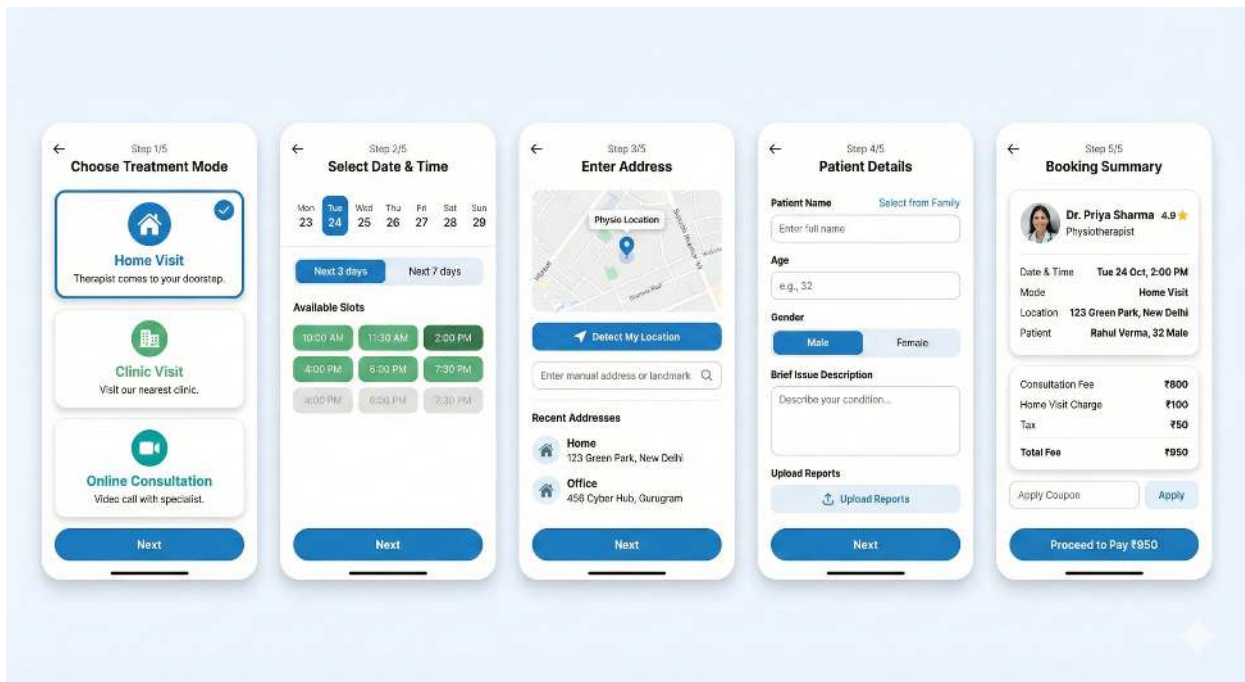

- If this scales to 10,000+ physios and 1M+ patients, what must NOT break? (e.g., verification, dispute handling, data security, booking reliability).
- If regulations change (e.g., telehealth rules tighten), how should the platform adapt?
- If you want to raise funding later, what metrics should the system be ready to track from day one? (CAC, LTV, retention, repeat rate, active physios, fill rates)
